

Financial Benefits of a Consolidated Service Center

Control your own supply chain with a consolidated service center (CSC) strategy. From source to patient across the health system network, a CSC will effectively and efficiently enable cost savings and quality care.

Top performing CSC adopters are operating with up to 65% less supply chain expense.

Logistics and Handling

Up to 30% reduction in logistics and handling costs.¹

How this is achieved through a CSC

Reduce transportation costs for all types of shipments including local supply chain by consolidated shipment and invoicing.

30%

Expiration Management

7-10% of products expire on hospital shelves.²

How this is achieved through a CSC

Decrease stock by eliminating obsolescence and expired products as well as remove procedural inventory write-off.

10%

Strategic Sourcing

Up to 20% reduction in spend through better purchase prices.¹

How this is achieved through a CSC

Utilize bulk purchase and market share discounts to achieve price point improvements.

20%

Standardization

20% reduction in suppliers.³

How this is achieved through a CSC

Reduce supply chain complexity with product standardization to improve risk mitigation and traceability as well as control counterfeit and recall products.

20%

Inventory Management

Up to 15% reduction in inventory.¹

How this is achieved through a CSC

Reduce inventory by effectively tracking product consumption by clinic area to improve turnover and release hospital supply storage space.

15%

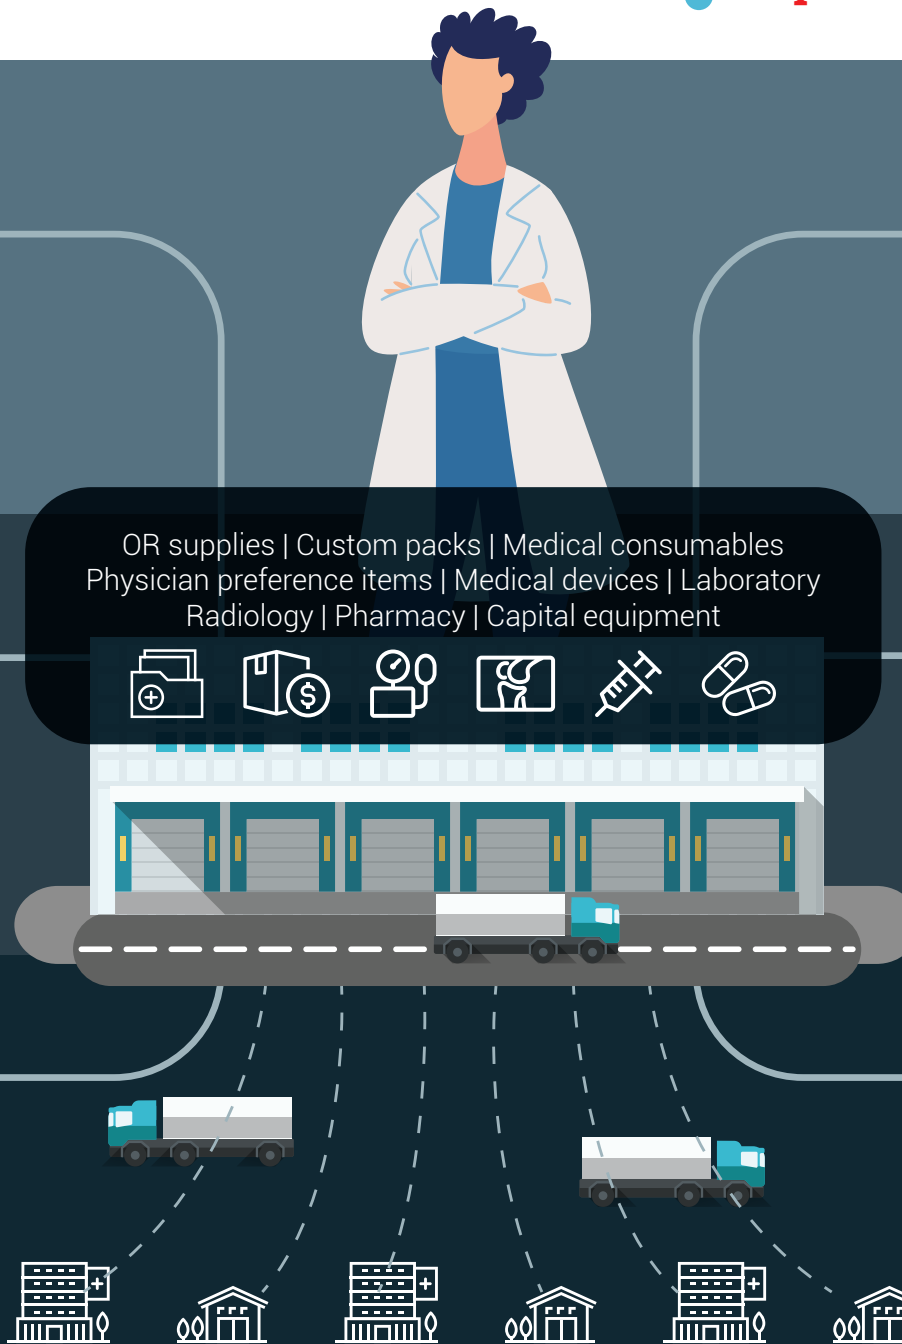

Backorders

20-60% reduction in backorders.⁴

How this is achieved through a CSC

Improved control of demand and increase fill rate to improve service to clinicians.

60%

Tecsys can provide you with proven ROI, audited by preeminent accounting firms, through the implementation of a consolidated service center strategy.
