

# What to Look for in a Midmarket Warehouse Management System

Making efficient use of your warehouse space and your inventory management processes as you grow can be a challenge. A WMS that's designed for **midmarket industrial distribution organizations** should enable distributors to make more informed inventory decisions, offer faster and accurate order turnarounds and provide excellent customer service.

## Scalable

An out of the box warehouse management system that can handle everything from receiving goods to the planning of distribution; scaling as your business grows.

## Industry Specific

Based on industrial distribution best practices to reduce your carrying costs, labor costs and inventory write-offs while increasing accuracy and maximizing inventory turns.

## Insights

Quick and accurate business performance data with executive dashboards, instant visibility of stocking levels, shorter turnaround on orders, all leading to improved customer satisfaction and increased productivity.

## Multi-pick Algorithm

Faster and smarter picking such as Batch pick, Pallet-picking, Single and Multi-pick. Industrial distributors can decide what works best for their warehouse workers and processes.

## Automation

New possibilities to streamline your operations and improve safety by integrating to automated systems and robots to stay ahead of the competition.

## Quick and Easy Implementation

Low risk, offering rapid deployment in just days (not months) with pre-set warehouse workflows requiring minimal training. The ability to have your warehouse team trained in just minutes will allow you to get back to being profitable and growing your business.
