

Warehouse Design: The 3P Method

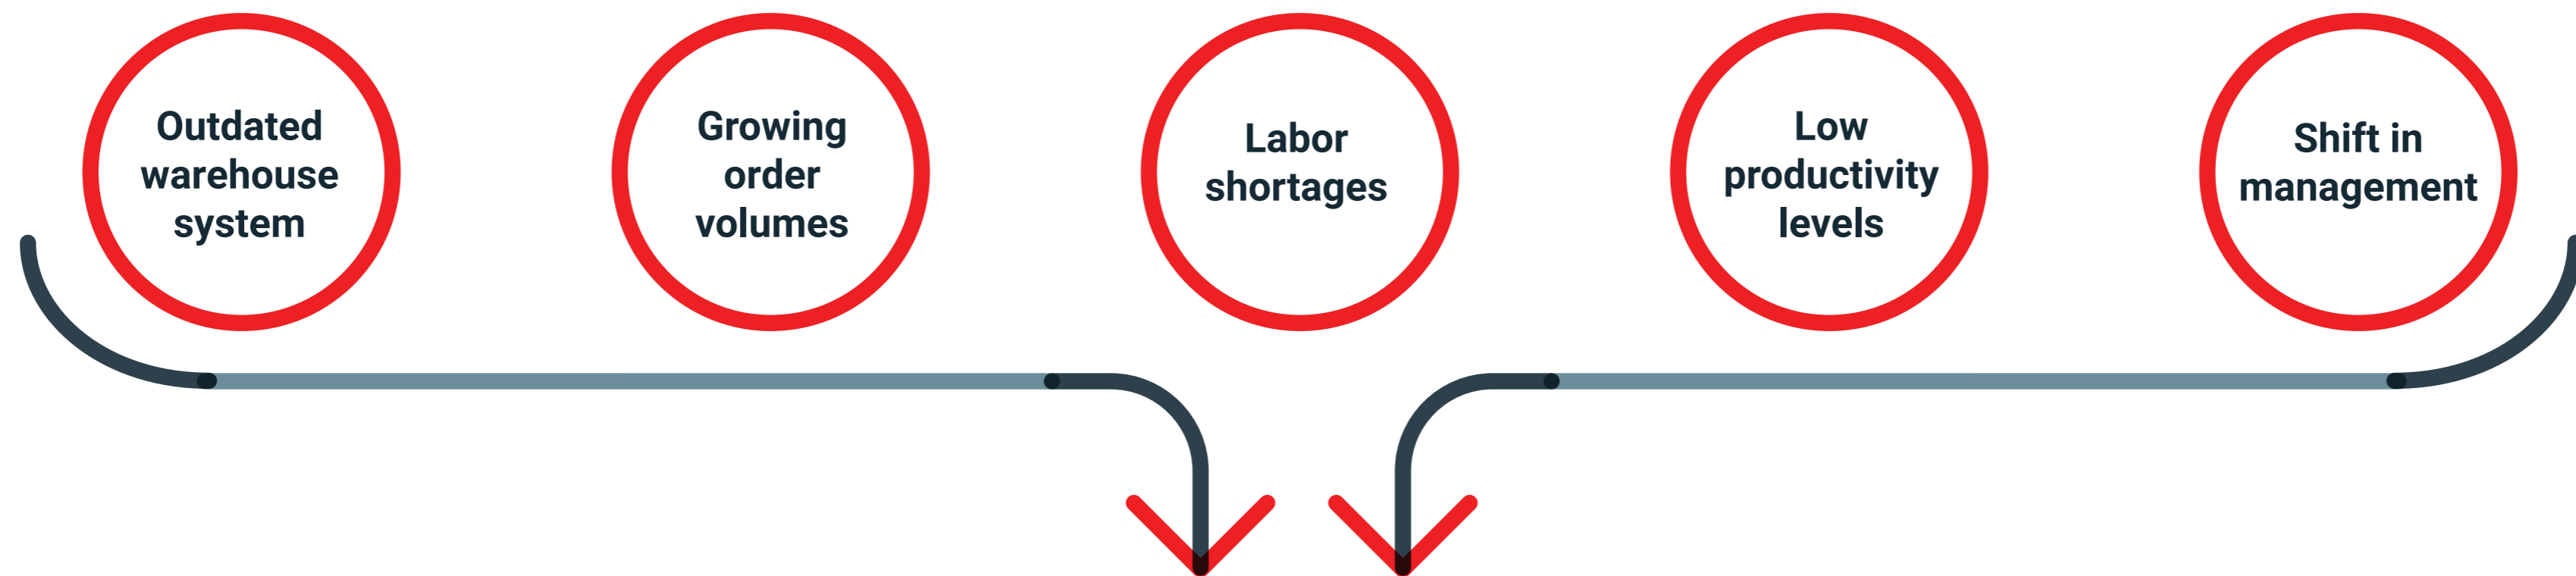

PRODUCTION, PREPARATION, PROCESS

The 3P (**Production, Preparation, Process**) design method is a streamlined and collaborative approach to warehouse optimization. This enables stakeholders and warehouse personnel to contribute their own innate knowledge and expertise to improve their warehouse design.

Why Choose 3P Design?

The 3P design method is unlike the traditional consultancy approach which involves little input from warehouse stakeholders and can lead to conflicting ideas and disconnected plans. Instead the 3P design process creates an inclusive and supportive experience by engaging all relevant warehouse parties to help optimize the warehouse space.

⚠️ Triggering Pain Points ⚠️

Getting Started

TEAMS INVOLVED:

Warehouse stakeholders

Warehouse personnel

Strategic design partner

WHAT YOU NEED:

A cross-functional team that contributes to the design efforts and decision-making process.

A strategic partner to determine the best elements to implement for future opportunities.

A design approach that supports shared knowledge and experience, reaching beyond the traditional consultancy process.
